codes & parameters

by 🔥 Creator **Impact**

Commands

Type at the beginning of your text field in discord

/subscribe : type this to pay for Midjourney & start creating
/imagine : command to start your prompt & create images
/blend : allows you to blend together 2 to 5 images
/settings : change your image generation preferences
/remix: remix mode, you can edit prompts when creating variations
/tune: allows you to create your own customized –style code
/list_personalize_codes: Lists your Personalization codes
/list_tuners: Lists your tuner codes used with V5
/describe : upload an image to generate a 4 prompts / descriptions
/shorten : shortens your prompt length
/info : stats about your account and this month's usage.
/fast : default speed for image generations, uses billable GPU time
/relax : a slower, low priority mode that doesn't use billable GPU time
/turbo : extra fast mode which is more expensive GPU time usage
/help : shows helpful information to help use Midjourney better
/show : insert a Job ID to view that job in discord
/private : creates images hidden from public (requires 'Pro' plan)
/stealth : does same as /private (requires 'Pro' plan)
/public : images you create will be publicly viewable.
/ask: ask Midjourney a question
/prefer option : create or manage a custom option.
/prefer option list : view your current custom options.
/prefer suffix : add default custom text to the end of every prompt.
/prefer variability: Toggle High & Low variations under an image grid.
/prefer auto_dm: Toggle sendn your results via DM in discord
/feedback: Submit feedback to Midjourney.
/invite: Get an invite link to the Midjourney server.
/list_personalize_codes: List all of your personalization codes.
/prefer remix: Toggle Remix mode
/userid: get your user Id

Use only in Midjourney Server rooms:

/docs : show Midjourney documentation
/daily_theme : join daily theme notifications
/faq : quickly generate a link to popular prompt craft channel FAQs.

Legacy Parameters

These Parameters work some older models of Midjourney

--hd / --test / --testp: older image models released after V3. –HD works in conjunction with V2 & V3

--uplight / --upbeta: Older upscalers for version prior to V4.

--sameseed: Make all images in the image grid very similar by applying the same seed for each

Current Image Parameters

Add these to the end of your prompt. Most work with the default Midjourney Model:

Aspect Ratio: --ar (numeric value width:height)
Set the aspect ratio of your image. Example: --ar 16:9 (16 units wide x 9 units tall)

Chaos: --chaos (0-100) changes how much variety there is in the image generation grid. *0 = low variation, 100 = highest variation.*

Quality: --q / --quality (1,2 or 4) higher number = more detail in your image.
Fast Mode: --fast add 'Fast mode' to your singular prompt
Relax Mode: --relax add 'Relax mode' to your singular prompt
Turbo Mode: –turbo add 'Turbo mode' to your singular prompt
Draft: –draft uses version 7 to create images very quickly, that you can enhance for better quality

Image Weight: –iw (0 - 2) change the priority of an image URL in your prompt. *0 = lowest, 2 = highest. 1 = default*

Negative Words: --no (words) Define words for Midjourney to avoid.
Example: city streets –no cars people (remove cars & people)

Repeat: –repeat (0-30) Submits a prompt multiple times. Example: --repeat 5 will produce 5 image grids.   *(2-4 for Basic, 2-10 for Standard, or 2-40 for Pro/ Mega)*

Seed: --seed (0–4294967295) a seed number is the starting point of an image generation. Using the same seed number and prompt will produce similar ending images. Great for testing.

Stop: –stop (10 - 100) finishes a job mid process. The number used represents percentage of job processing the render will stop at.

Weird Mode: --weird (0-3000) adjust image weirdness. *0 = lowest, 3000 = highest*

Stylize: --s / --stylize (0-1000) influences how strongly Midjourney's default aesthetic style is applied to Jobs. *0 = Lowest, 1000 = highest, 100=default*

Personalization: --p or **--profile** personalizes your Ai Art model aesthetic. Control the level by using Stylize above.

Experimental: --exp (0-100) influences how strongly Midjourney's experimental aesthetic style is applied to Jobs. *0 = Lowest, 1000 = highest, 100=default*

Omni Reference: –oref (1 Image URL): Add image URLs of an object, background or person to include in your image. **–ow 1-1000** changes how much the object is referenced. --ow 1 = Lowest, --ow 1000 = Highest.

Style Reference: --sref (1 - 3 Image URLS): Add image URLs to influence the style of your AI Art (v6 & niji 6). **--sw 0-1000** strengthens the influence of the style reference. **--sv 1-4** creates different versions of referenced style. **--sref random** produces a random style and style code.

Character Reference: --cref (1+ Image URLs): Add image URLs to set a character reference in your images (v6 & niji 6). Use **–cw 0-100** to strengthen the influence of the character reference.

Video: --video creates a video showing the render process of an image grid. React to the grid with an envelope emoji in Discord to access video

Stealth: --stealth hides your image from public view (not available on all plans)
Public: –public makes your images publicly viewable
Tile: --tile create a seamless tiling pattern

–style & --v / --version:
see following page

models & prompt tools

by 🔥 Creator **Impact**

Image Models & Styles

Type **/settings** to activate these models, or type in the --code listed below to to use them with your prompt. Some are only available if typed in manually.

Versions 1 - 3:
--v 1 / --v 2 / --v 3
The above were the first 3 image models for Midjourney

> **Note:** You will notice some styles added to some of these codes, which further alter your image generations

Version 4: --v 4 (uses style 4c by default)
Version 4, Style 4a: --v 4 --style 4a
Version 4, Style 4b: --v 4 --style 4b
Version 4, Cursed Style: --v 4 --style cursed
Version 4 went through 3 variations or 'flavours', hence styles 4a, 4b and 4c (4c being default,). Cursed is a secret style which makes things look creepy and cursed.

Version 5: --v 5
Version 5a: --v 5a
Version 5.1: --v 5.1
Version 5.1, Raw Style: --v 5.1 --style raw
Version 5.2: --v 5.2
Version 5.2, Raw Style: --v 5.2 --style raw

Random Style: --style random
Personal Style: when using /tune, you will generate a unique style code you can use with this command. You can also find styles by using 'random' above.

Version 6: --v 6
Version 6, Raw Style: --v 6 --style raw
Version 6, Random Style: --v 6 sref random
Version 6.1: --v 6.1
Version 6.1, Raw Style: --v 6.1 --style raw
Version 6.1, Random Style: --v 6.1 sref random

Version 7: --v 7
Version 7, Raw Style: --v 7 --style raw

Test Model: --test
Test Photo Model: --testp
Test Model, Creative Style: --test --creative
Test Photo Model, Creative Style: --testp --creative
The test models are higher resolution and released before version 4. They are high quality but not as high as version 4 or onwards.

Niji Version 4: --niji 4
Niji Version 5: --niji 5
Niji Version 5, Cute Style: --niji 5 --style cute
Niji Version 5, Expressive Style: --niji 5 --style expressive
Niji Version 5, Scenic Style: --niji 5 --style scenic
Niji Version 6: --niji 6
Niji Version 6, Raw Style: --niji 6 --style raw
Niji is an anime / Japanese illustration style model. The styles are::
Cute is for cute cartoony characters
Expressive is more sophisticated illustrations
Scenic works best for backgrounds and scenic shots.

Video Parameters

These work with Midjourney Motion / Ai Video, on the website only

Motion High: --motion high Output video is more likely to result in big camera motions and larger character movements.

Motion Low: --motion low Output video is more likely to result in still scenes, low camera motion, slow motion, or subtle character movements.

Video Raw: --raw reduces the extra creative flair that Midjourney usually adds, allowing your prompt text to have more influence on the output video

Multi Prompts & Word Weight

Separate phrases & rank words based on their importance.

Multi Prompting:
Adding '::' at the end of a word or phrase separates it.
One good example is "cup cake", will produce a single cupcake.
But "cup:: cake" will produce a cup and a cake.

Word Weight:
Add '::' and a number to rate a word's relevancy in a prompt. The default number is 1, so having a word ranked at 2 or higher increases it's importance.

Example:
"a fast car::2 in the city" makes the word 'car' twice as important as the other words in the sentence.

But "a fast car::0.5 in the city" devalues the word car and it will prioritize the other words in the prompt before it.

I've seen this word weight number used as high as 100 or as low was -0.5 (which is the same as using the --no parameter.

Permutations

Craft a series of prompts from one command. By using curly backets '{' & '}' at the beginning and end with comma separated terms in between. You can separate various phrases.

Example:
"/imagine prompt: a colorful {turkey, chicken, dog} running {--ar 1:1, --ar 3:2}"
Will produce:
a colorful turkey running --ar 1:1
a colorful turkey running --ar 3:2
a colorful chicken running --ar 1:1
a colorful chicken running --ar 3:2
a colorful dog running --ar 1:1
a colorful dog running --ar 3:2

Note: adding a slash before a comma in permutations, keep sthat comma from separating an item.

Example:
"/imagine prompt: {dog, cat\, black}"
Will produce:
dog
cat, black
